

Baylor College of Medicine's Aortic Surgery Fellowship Program is a one-year non-ACGME accredited program that is approved by the Texas Medical Board. The mission of this fellowship is to provide specialized training in aortic surgery beyond cardiothoracic residency training in an environment that is aortic-focused and stresses clinical excellence. This fellowship includes an intense clinical experience in aortic and adult cardiac surgery at the Texas Heart Institute at St. Luke's Episcopal Hospital.

Expectations for the fellow's experience include a full understanding of the anatomy, physiology, and planning of specialized aortic and other advanced cardiothoracic operations as well as the technical performance of these procedures. The fellowship is designed to expose the fellow to a wide variety of complex aortic and other cardiothoracic cases and to allow increasing responsibility for decision making and operative experience. Inpatient postoperative care is also provided by the fellow with increasing responsibility.

The deadline for applications is November 1 of each year for the program commencing the following July. For a full program description and to receive the appropriate application requirements and forms, please send a request to:
